

The Watch Dog Road Side Safety Worker Alert System

*Warn your road side workers when
a vehicle is approaching unsafely.*

The Watch Dog has a built-in radar which will detect vehicles that are travelling at unsafe speeds within a designated proximity of road side workers.

The unit will alert those workers in danger, by means of either a siren or air horn, giving them enough notice to take evasive action.

You can set up the system in less than a minute. Using the touch screen interface on the unit, simply tell the system what the maximum safe speed is, and either how much alert time you need or the minimum vehicle distance away the system should sound the alert.

One Watch Dog mobile unit consists of:

- Weather-Proof Carrying Case
- Computer with Touch Screen
- Radar Unit
- Radar Tuning Fork
- Sounder/Siren
- Battery
- Battery Charger
- Solar Charging System
- Battery Monitor
- Software
- Complete set of operating instructions
